Monitor dual engines or tank levels with the EMU-1

The latest firmware updates for the DAME Award nominated Engine Monitoring Unit (EMU-1), take the specialised analogue to NMEA 2000® Gateway into a class of its own.

The EMU-1 can monitor two engines where each engine has three (or less) gauges that require monitoring. Where dual engines have more than three gauges each to monitor, multiple EMU-1 units can be used.

Use the PC-based configuration tool to tailor the EMU-1 settings to monitor two engines or the fluid levels in up to six tanks. The EMU-1 will reliably deliver the data to the network, enabling NMEA 2000 display devices to monitor the engines or tanks on a vessel.

For tank level monitoring, the addition of a configurable ‘instance’ for each tank allows the user to identify which tank the data is coming from.

With the added dual engine feature, the Actisense team have entered the EMU-1 into the Design Award (DAME) at this year’s Marine Equipment Trade Show (METS) in the marine electronics and marine related software category.

Actisense highly recommend that all users update to the latest version of firmware to get the most out of their EMU-1. All firmware updates are freely available from the EMU-1 download webpage.

It’s METS time again

The 2014 Marine Equipment Trade Show (METS) is fast approaching, running from 18-20th November at the Amsterdam RAI Convention centre. Actisense will again be exhibiting, in our usual spot, on stand 03.128 in the British Pavilion. The stand will have the full Actisense product range on display and the team will be on hand to answer all your NMEA related questions.

This year we have entered the hugely successful Actisense Engine Monitoring Unit (EMU-1) into the DAME Awards, come along to our stand and find out more about this truly innovative product. Alternatively check the EMU-1 webpage for more information.

Actisense will be represented by Andy Campbell at the NMEA 2000 ConnectFest on the afternoon of 19th November, so pop along and check out all the latest NMEA 2000 innovations.

Be sure to include the Actisense stand (03.128, British Pavilion) in to your show itinerary, if you would like to book an appointment with one of our team during the show please contact Lesley Keets on lesley@actisense.com.
