Massive Expansion for Intellian's Rotterdam Facility

17 Jul, 2014

Intellian Technologies has quadrupled the size of its logistics centre in Rotterdam, expanding its fulfilment, office, and training facilities to meet increasing global demand for the company’s products. The investment solidifies Intellian’s position as the industry’s only hardware provider with a direct supply chain spanning three continents: Europe, North America, and Asia. Three facilities, strategically located to facilitate prompt delivery and convenient training, support Intellian’s full range of VSAT, Global Xpress, FleetBroadband, and TVRO solutions.

Rotterdam’s expanded site now maintains a $10 million inventory, enabling rapid response to increasing market demand for high speed connectivity and entertainment. Intellian’s improved response time strengthens its position as a key strategic partner for the industry’s largest service providers and systems integrators.

Weekly container shipments from the manufacturing facility in South Korea to Rotterdam will ensure product availability, while expanded support and training centres reinforce Intellian’s value-added capabilities in the region.

Jon Harrison, General Manager of Intellian Europe commented: “In the last few years we have experienced considerable expansion throughout the world and developed a wide range of maritime segments for our products, from medium to large leisure yachts through to superyachts, cruise ships and tankers. With our new Rotterdam International Logistics Centre, we can provide the fastest delivery, factory trained engineering and
professional installation available today, which positions us to better enable expansion of the maritime market throughout Europe.”

About Intellian Technologies, Inc

Intellian is the global leader in maritime satellite communication antenna technology. This well established company has an international reputation for bringing patented innovation to the VSAT and TVRO market. One of the fastest expanding companies in the industry, Intellian exports its products to 6 continents and over 45 countries with over 400 contracted dealers and a worldwide support network. It is currently undergoing a substantial expansion of its manufacturing and R&D facilities in Korea.

The company’s extensive technical capabilities cover TVRO, VSAT with the latest Global Xpress™ capabilities and in house development and manufacture of FleetBroadband systems. The company provides a 3 year warranty on all VSAT antennas which is unique in the maritime industry. With expertise in recreational boats and ocean vessels in the commercial, oil & gas markets, and the military, Intellian antenna technology reaches a wide market sector. Headquartered in Seoul, Intellian also has a Maritime Technical Centre in Busan, South Korea as well as offices, warehouse and engineering centers located at major shipping destinations around the world, all with the staff and resources to support the company’s global customer base.
