Phil has been asked to focus his address to audiences on Gateways and how they connect NMEA® 0183 or networked PCs to the NMEA 2000® network and CAN bus, as part of the exhibition’s Education Track programme. As Actisense have extensive experience with NMEA interfacing and have produced several celebrated products in this area, Phil was the obvious choice to lead on this subject.

Actisense also have a stand at the exhibition, supported by US Distributor, Gemeco Marine Accessories and Canadian Distributor, Northport Systems Inc. Visit stand 12 to see a demonstration of the Engine Monitoring Unit (EMU-1).
