Actisense NMEA 2000® Connectors and Cables

Actisense is proud to announce the latest additions to the growing NMEA 2000® product range.

The Actisense designed NMEA 2000® range of cables and connectors are certified and will be available from Actisense distributors and dealers in the next few months.

Superior to similar products available, Actisense have carefully considered the install and usability issues found with other manufacturers connectors and have designed the range with this in mind.

The Actisense Micro Bulk Cable is UL certified and will be available in 100 metre reels. The same cable will be used in the 10 metre, 5 metre, 1 metre and 0.5 metre Cable Assemblies.

The Actisense T piece will provide simple installation where a drop connection is required and the male and female Terminators are used at either end of an NMEA 2000® backbone to ensure proper operation.

Future additions to the range will be a Power T and Panel Mount Connectors, which will be available in the later months of 2011.
