GOST Marine Security & Tracking Systems
To Be Featured At Sanctuary Cove International Boat Show

See at booth 376, Superyacht Pavilion, Sanctuary Cove, Queensland, May 19-22

QUEENSLAND, AUSTRALIA – GOST Australia (Global Ocean Security Technologies - formerly Paradox Marine) will feature the full range of GOST marine security, monitoring and tracking systems at the 2011 Sanctuary Cove International Boat Show, May 19-22 (booth 376 in the Superyacht Pavilion).

GOST Insight will be a featured system at the show. Insight includes all the components necessary to help protect a boat and keep an eye on exactly what is happening onboard at all times. The system sends emails and text messages when events occur and saves a snapshot or video clip to the user’s account which is accessible on any computer or mobile phone with internet access. The owner sees what the camera sees when motion is detected and it also allows the owner to login and view streaming video off the boat on their computer or cell phone.

In addition, Insight notifies a boat owner or captain with a phone call if there’s high water in the bilge, low battery voltage, loss of shore power, smoke or intrusion. If the boat is moved without authorization or stolen, Insight will send emails or text messages every 15 minutes (programmable) with the vessel’s speed, heading, latitude and longitude.

Connected to the internet through a 3G GSM communication device, Insight provides complete access to a boat from any computer with internet access or through a web-enabled mobile phone. The system has complete GPS tracking through the Inmarsat IsatM2M network and will report alarm notifications from anywhere in the world. When in 3G range, Insight will report alarms with a voice message, and/or email and/or SMS text message and allow owners to view live video feeds off the boat. The system will also interface with onboard satellite equipment for global video streaming and two-way voice communication.

Owners and captains have a personalized, password-protected web page to view live streaming video from onboard cameras and archived footage from triggered events.

Other GOST Products

Left to right: GOST Nav-Tracker, GOST Marine Magellan, GOST Watch, GOST Acoustic
Barrier and GOST Immobilizer.

GOST Nav-Tracker - Inmarsat Satellite-based GPS Tracking. Remotely control geo-fence and track your vessel online anywhere in the world using Google Earth interface. This product was awarded a medal by the US Coast Guard for assistance in the recovery of various high profile vessels.

GOST Marine Magellan - Wireless security & monitoring. Call into system from any phone to arm/disarm or control relays. Up to 32 wireless sensors & eight wireless relays. Systems available for any size vessel.

GOST Watch - Surveillance system that can easily add-on to existing cameras onboard, which enables you to view your cameras remotely from your smart phone or computer from anywhere at any time.

GOST Acoustic Barrier - Functions as a sound barrier or as a traditional siren. GOST Acoustic Barrier effectively stops intruders in their tracks by generating a patented unbearable pattern, frequency and intensity noise.

GOST Immobilizer - The GOST Immobilizer is a simple yet effective device for protecting tenders, outboard boats, or Jet Skis from theft. The system is controlled via key fob and when armed will prevent the engine from starting. It allows a low amount of current draw through the GOST Immobilizer to power things like stereo memory and other low power consumption components. When armed, it blocks high current draw from the battery as the starter is engaged. When someone is attempting to start the vessel, it will not start and the siren will sound for a predetermined set time.
