INTELLIAN DRAMATICALLY INCREASES WARRANTIES FOR ANTENNA SYSTEMS

Tullett Prebon London Boat Show, 6th – 15th January 2012, Stand C113

Intellian, the world’s technological leader in marine satellite antennas, recently announced a major increase in warranty periods for its VSAT and TVRO antenna systems. VSAT and 3-axis TVRO warranties have been increased to an industry-leading two years for parts and one year for labour, while the i-series 2-axis antenna warranties have been increased to three years. The extended warranties illustrate the company’s confidence in the build quality and design of its antennas and its commitment to providing customers with outstanding value.

Intellian’s unprecedented new two year VSAT warranty is unmatched by other marine satellite antenna manufacturers and underscores the company’s state-of-the-art engineering and development abilities, as well as its immaculate record of reliability.

“We have seen tremendous growth in our VSAT sales over the last year,” said Eric Sung, President of Intellian. “We are totally confident in our products which pass through exhaustive testing processes at our Technology Centre, so the new warranties will provide our customers added peace-of-mind and confidence in the Intellian brand. It is another reason for Intellian being the fastest growing company in the marine satellite communications industry.”

The Intellian range of TV antennas incorporates the most advanced technology currently available. With HD and Worldview LNB capabilities Intellian TV has led the industry in producing high performance antennas, which are more compact and robust in order to meet the demanding applications of commercial shipping, fishing and leisure yacht markets. Two and three year warranties in these products further enhance the customer value.

Intellian has a complete range of VSAT solutions from the 60cm antenna designed for smaller vessels, to the 2.4m solution designed for reliable communications anywhere in the world. Intellian’s team of highly trained engineers evaluates its entire range of products at a state-of-the-art Technology Centre where each antenna is subjected to extreme shock, vibration and product-life testing. By reinvesting over 20% of its revenue into R&D, Intellian offers a constantly growing range of different maritime VSAT, Inmarsat communications and TV antennas. The increased warranty for VSAT products is backed by a global network of service and installation technicians providing customers with complete confidence in an Intellian VSAT system wherever the vessel operates.

More information on the new Intellian warranty program is available at www.intelliantech.com.
