To keep up with the extensive growth of its distribution in North and South America, Aqualuma Underwater Lighting named OceanView Technologies as its second US importer. The company will bring over Aqualuma's entire line of underwater LED lights, from thru-hull units to the soon-to-be-released surface and spreader lights.

"Aqualuma's LED lights are high-quality, easy to upgrade and completely serviceable from inside the boat. No haul-out is necessary after initial installation," said Mike Bader, OceanView Technologies CEO. "We were very excited and satisfied with the amount of interest and attention these lights received at the recent Miami Boat Show. It was very successful for us."

Based in both Boca Raton, Florida, and Dallas, Texas, OceanView Technologies is a leader in maritime, multi-sensor night-vision camera manufacturing. Breaking ground for the way the world sees in the dark, the company supplies products to the pleasurecraft, sportfishing, superyacht, cruise ship, commercial and military markets.

Aqualuma's range of thru-hull LED lights includes the one, three or six Series in blue, white or green, for boat customization. It also carries an industry-leading three-year warranty.
