June 30, 2011

The Four Blade V.P. Max-Prop offers smoother operation and stronger performance against heavy wind and seas when compared to a two or three blade propeller. The Variable Pitch (V.P.) provides external pitch adjustment, making it easy to fine tune with the vessel in the water.

The Four Blade V.P. Max-Prop is shipped fully assembled and is easy to install like a fixed propeller.

Please contact us for more information on the entire line of Max-Prop Feathering propellers.

PYI Inc. also manufactures and distributes the P.S.S. Packless Sealing System Shaft seal, Seaview electronics mounting solutions and R & D Drive train equipment.
