PYI Inc. Appointed North American Distributor For NRG Marine’s Sonihull Ultrasonic Antifouling System

Lynnwood, Wash. – PYI Inc., a premier manufacturer and distributor of high quality marine equipment is now the North American Distributor for the Sonihull Ultrasonic Antifouling System.

Sonihull is a non-polluting, marine antifouling system that uses a digitally produced ultrasonic signal to inhibit or eliminate marine growth below the water line, and in onboard plumbing systems.

The Sonihull brand produced by NRG in the United Kingdom continues to expand worldwide as the marine marketplace looks for ways to reduce fuel and maintenance costs.

Sonihull is: Effective, Environmentally Friendly, & Economical. Effective because it stops marine growth at the beginning of the food chain. Environmentally friendly because no contaminants are used or go into the water. Economical because it pays for itself by reducing maintenance, operating, and fuel costs.

Kevin Woody, V.P. at PYI Inc., commented that, Sonihull has proven itself on pleasure boats, out drives, saildrives, commercial marine applications, catamarans, and ships. The Sonihull system also allows for longer maintenance intervals for sea chest intake manifolds and onboard plumbing systems. The Sonihull has proven itself on stationary marine structures, water treatment facilities, and other non-marine industrial applications.

Sonihull is a great addition to PYI's other product lines, providing high quality solutions to today’s pleasure boat owners and commercial marine operators.
Please contact PYI Inc. for more information at www.pyiinc.com/sonihull or call 800-523-7558
