Raymarine Dragonfly delivers amazing views of the underwater world – share your underwater images for the chance to win Dragonfly prizes

April 29, 2013

Raymarine’s innovative and award-winning Dragonfly™ is the latest high-technology sonar that has to be seen to be believed. Now available internationally through marine retailers and dealers, all boaters want to get their hands on the compact, stand-alone, high clarity colour screen sonar and GPS chartplotter.

Dragonfly’s technology provides two independent channels enabling the ultimate in fish targeting through its CHIRP ClearPulse technology, with amazing photo-like underwater imagery using CHIRP DownVision™. Simply switch between the screens to choose a split screen view of the fish around you and the high clarity images of the terrain beneath you, or choose Dragonfly’s chartplotter function with 50-channel high precision GPS and Navionics Silver or Gold cartography to see exactly where you are on screen.

A team of international Raymarine ambassadors and selected product testers have been using pre-production models of Dragonfly and posting amazing videos of its capabilities online. Raymarine is now offering everyone the chance to get their hands on Dragonfly accessories and even win back the price of their Dragonfly, complete with transom mount CPT-60 CHIRP sonar transducer, simply by sending in their best screen images.

The Raymarine Dragonfly Screen Capture Contest challenges boaters and
anglers to send in and share with the world their best ‘Dragonfly in action’
screen captures, pitting the best against the amazing high clarity views of a
wreck in Lake Lanier, Georgia USA, and Pittwater Wreck off the coast of New
South Wales, Australia.

Each month Raymarine will choose the best submissions and the winners will
receive a Dragonfly sun cover and carrying case for any screen capture
images published by the company. Additionally, one lucky winner each
month will receive a refund of the full purchase price of their Dragonfly
system. The official entry form and details are available at
www.raymarine.eu/dragonfly.

Dragonfly is now available worldwide through Raymarine’s marine
electronics retailers and dealers. All Dragonfly units include a high-
performance, transom-mount, dual-element CHIRP DownVision transducer
and tilt/swivel mounting holster.

**About Raymarine:**

Raymarine, a world leader in marine electronics, develops and manufactures the most
comprehensive range of electronic equipment for the recreational boating and light
commercial marine markets. Designed for high performance and ease of use, the award-
winning products are available through a global network of dealers and distributors.

The Raymarine product lines include radar, autopilots, GPS, instruments, fishfinders,
communications, and integrated systems. Headquartered in Portsmouth UK, Raymarine is a
division of FLIR Systems, a world leader in thermal imaging. For more information about
Raymarine please go to www.raymarine.com.

**About FLIR Systems:**

Pioneers in all aspects of infrared technology, FLIR designs, manufactures, and supports
thermal imaging systems and subsystems for industrial, scientific, government, commercial,
and firefighting applications. With almost 50-years of history in infrared innovation, over
100,000 systems in use worldwide, and development centres and sales offices in over 60
countries, FLIR is the world leader in thermal imaging technology. Visit the company's
website at www.FLIR.com.
