Raymarine e7 MFD and i70 instruments at METS

Raymarine, a world-known marine electronics leader, will present the first 7” multifunction display in the world, e7 at METS 2011, held in Amsterdam, 15th – 17th November. This device offers expansive networking and wireless Bluetooth control for onboard control systems.

Boaters have on-screen control of thermal cameras and are able to stream live video direct to their iPad or iPhone in real time, making navigation charts, thermal video, radar and sonar information more accessible and portable than ever before.

The new i70 instrument and p70 and p70R autopilot control heads are the perfect companions for sailing, cruising and fishing; stylish new-look controls and displays packed full of powerful features, stunning graphics and a highly intuitive user interface herald the Raymarine next generation, combined with a world-first AIS repeater.
