Cobham’s Sea Tel® announces 2010 flagship 10 Series Antenna

CONCORD, CA – Cobham SATCOM is pleased to announce its new Sea Tel XX10 marine stabilized antenna, specifically developed to enable bandwidth conscious customers to enjoy the benefits of Always-On VSAT network in the maritime environment.

The XX10 series is a lighter weight, easy-to-install, marine stabilized antenna system for broadband connectivity. Available in 40 inch (100cm) and 50 inch (125cm) reflector sizes, it is configured to be compatible with all Ku-Band frequencies. It is designed to meet some of the most stringent design specifications such as EN 60945, MIL STD 461, MIL STD 167-1 and IEC 60950. The XX10 will run with Sea Tel’s latest DAC (digital antenna controller), along with the latest generation electronics and software. The XX10 system is fully enabled to work with remote management devices to provide remote access, control and management of the system. The antenna will also be equipped with the proven Sea Tel stabilization system, isolating the antenna system from ship’s motion no matter how rough the sea state or weather conditions. The XX10 is available both in co polarization configuration for global customers and cross polarization configuration for regional customers.

“The XX10 has been beta tested and we have received extremely positive feedback from our dealer network. It has the potential to be the catalyst for significant increase in the adoption of maritime VSAT in commercial shipping and leisure industries,” said Cobham SATCOM Vice President John DeSana. “We expect very strong growth in the market in the next year and the XX10 will allow our customer base to offer a complete suite of solutions to the end market.”

The XX10 will enable Sea Tel dealers to offer a higher return on investment and reduced cost of ownership, with application specific products for their customers. Sea Tel is currently shipping this product worldwide.
About Cobham: Cobham’s products and services have been at the heart of sophisticated military and civil systems for more than 75 years, keeping people safe, improving communications, and enhancing the capability of land, sea, air and space platforms. The Company has four divisions employing more than 12,000 people on five continents, with customers and partners in over 100

About Cobham SATCOM: Cobham SATCOM’s Sea-Tel range was founded in 1978, and is now one of the world's leading ranges of marine stabilized antenna systems for satellite communications and satellite television at sea. Cobham SATCOM has 30 years of marine experience and is dedicated to constant improvement through innovation and design enhancement. The antennas range from 14 inches to 14 feet, the widest range of any maritime antenna manufacturer and enable connectivity in the harshest environment on the planet across all maritime segments.

Cobham SATCOM is a leader in mobile satellite communications technology and interoperability solutions for commercial and governmental mobile broadband satellite communications. The core expertise of the business is in automated satellite acquisition and tracking equipment, in all bands across the frequency spectrum. The antennas and communications services are used for military and governmental agencies such as homeland security and law enforcement to provide secure, reliable and efficient communications.
