The Twin Disc EJS

*It’s simple. Don’t buy your next boat without it.*

The Twin Disc Express Joystick System® (EJS) absolutely revolutionizes docking and slow speed maneuvering of diesel powered, conventional driveline boats. With easy fingertip movements you control direction and speed - instantaneously.

The EJS smoothly and simultaneously actuates and controls engines, transmissions and thrusters. You can effortlessly move the boat in any direction and even pivot it on its own axis. Its performance dramatically exceeds any other propulsion system.

The Twin Disc EJS brings incomparable control and enjoyment to even the most difficult docking situations. Once you try it, you can’t imagine driving your next boat without it.
