

**National Marine Electronics Association  
International Marine Electronics Alliance  
Technical Bulletin  
Technical Errata TE# 2000 201601052  
Termination Resistor**

**NMEA 2000 Edition 3.10 February 2015  
NMEA Appendix I Version 1.000 December 2014**

**Introduction:**

This Technical Errata details the required specifications of the termination resistor.

This corrects a requirement that was inadvertently omitted with this new Version of NMEA 2000, Edition 3.10 of the Appendix I Version 1.000. This restores the missing required characteristics published in Section 2.6.1 of all previous versions of the NMEA 2000 Main Document Standard.

The previously omitted text is highlighted in **red** below.

This text will be published with a new Version of the NMEA 2000 Edition and a new Version of Appendix I Document. In a New Version on Appendix I, this text will be added to the current section 5.3 Termination Resistors.

This requirement shall take effect immediately and is retroactive to the publication date of the NMEA 2000 Appendix I Version 1.000 December 2014.

**Change summary**

**Termination resistors shall be 120 Ohms +/-5%, ¼ Watt minimum power dissipation rating.**
